

Hi!

My name is Álvaro, a designer with a passion for coding. My fascination with programming began early, leading me to explore HTML, CSS, and JS through crafting demos of my own designs. This practice has been a constant throughout my career, fostering exceptional synergy with engineering teams. My ability to grasp their language has always enhanced our collaboration.

My Codepen and Sandbox are full of exercises of which I'm proud, but let me recommend some to you:

**Tailwind Pricing View** (<https://codepen.io/alvaaz/pen/XWYRyZK>)  
Demo exercise to explain the Grid and :has pseudo class.

**Login** (<https://codesandbox.io/p/sandbox/login-s6fpo>)  
Login form handling multiples states. Proof of concept to learn React and its useState hook.

**Table** (<https://codepen.io/alvaaz/pen/LYrOQbd>)  
Exercise to learn and teach my team how to create beauty tables.

for more fun projects check out my Github ([goede.cl/github](https://goede.cl/github))

I'm passionate about witnessing my designs materialize through web technologies and actively contributing to their realization. My commitment extends to perfecting each detail, striving for pixel-perfect accuracy with web technologies. Additionally, my enthusiasm for sharing knowledge has led me to create a YouTube channel and engage in my country's Figma community to spread awareness about the tool.

As I like to share what I learn and know that coding can be intimidating for us designers, I created a course together with Platzi to introduce web development to those designers without any background in it.

I am eager to join the Tailwind team, where I can dedicate my days to crafting demos and exploring the full potential of CSS. My goal is to demonstrate to other designers the vast capabilities and creative possibilities that Tailwind unlocks.
